## Step 1 — Command Prompt

Best match		Command Prompt -
Command Prompt App	$\rightarrow$	c:\Useri\Ryan Christ pipconfig Mindows IP Configuration
Settings	Command Prompt	Ethernet adapter Ethernet: Media State : Media disconnected
G Choose if the Narrator key is locked	>	Connection-specific DNS Suffix . : Nireless LAN adapter Local Area Connection* 1:
Use Sticky Keys to press one key at a time for keyboard shortcuts	> Copen	Media State
<ul> <li>Replace Command Prompt with Windows PowerShell when using</li> </ul>	>	Media State Media disconnected Connection-specific DNS Suffix . : Nireless LMN adapter Wi-Fi:
<ul> <li>Manage app execution aliases</li> <li>Allow the shortcut key to start Sticky</li> </ul>	> Pin to taskbar	Connection-specific DNS Suffix ::
Keys	>	PPv4 Address,
명 Change Narrator's keyboard layout Search the web	1	e. vozers tryan en steyz
Comma - See web results Documents (4+)	>	

(i) This step only has to been done if your computer is also connected to an external Wifi Network.

- Open Command Prompt on your Computer.
- In Command Prompt type *ipconfig*
- Under the Wireless LAN Adapter make note of IPv4 Address.
- (i) The Duets ip Address will need to be on a different Subnet for example if your adaptor is "192.168.1.10" our Etherent Adpator for the Duet needs to be "192.168.2.10

# Step 2 — Configure Ethernet Port

	All Apps Documents Settings Web Best match C Apps Apps Run → Search the web P control - See web results → Settings (7+)	More * Feedback ***			en hi minde in Neurith sander E + 12 0. <sup>10 A</sup> <sup>10 A</sup> <sup>10 A</sup> <sup>10 A</sup>
--	--	---------------------	--	--	---

- Open Control Panel on your computer.
  - Access the Network and Sharing centre.
  - Click Change Adaptor Settings.
  - Right Click on the Ethernet Port to Edit the properties of that Device.

#### Step 3 — Configure Ethernet Port Part 2

	vselected					

- Click on the heading -> Internet Protocol Version 4 and access its properties.
- Click -> Use the following IP address:
- Create an IP Adress that reflects the Subnet discovered previously in the Command Prompt -> ipconfig.
  - (i) You can use the example shown, please ensure you place it on a different Subnet, .2 or .1

A The Subnet Mask will auto generate, It is not required to set a default gateway.

#### Step 4 — Enable Network Module

- First, check the status of the Ethernet Module by sending command "M552" to Duet.
  - (i) If Duet returns Wifi or Ethernet module is disabled, put it into idle mode it by sending command "M552 S0". If it returns Wifi or Ethernet module is idle, proceed to the next step.
- Send the Command M552 S1 P-ipadress
  - (i) We have sent M552 S1 P192.168.2.12
  - ▲ The final number of this IP address has to be different from the final number of the IP used on the ethernet port configuration. We used 192.168.2.14 on our ethernet port, so have used 192.168.2.12 on the Duet.
- Send M552 to confirm the Network is enabled and connected to the correct IP Address.

## Step 5 — Open Duet Webcontrol

- Open your browser and type the IP address assigned to the Duet. We have used 192.168.2.12 as an example.
- You should now see the main control page for the Duet!
- (i) Remember to Bookmark the Website and add it to your favourites for easier future access.

Thanks for following the guide. Any issues, please contact us!
